

User Requirements Specifications Description

Part A: Introduction

This task is to elicit the requirements from different perspectives for your software project. There are the following three sources to collect the requirements:

- (1) Assigned customers or users for your software system: According to the online table (No.), the first team is the customer of the second team; the second team is the customer of the third team; ...; the last team is the customer of the first team. **This part is compulsive.**
- (2) Real potential customers and users for your software system: Based on your detailed software system, try to find the real potential customers and users for eliciting their requirements. **This part is optional but suggested.**
- (3) Your team members as the customers and users: From the perspective of your team members, try to identify the requirements of your team. **This part is optional.**

Part B. Writing a User Requirements Specification

Please refer to the template in the Moodle platform. It should be noted that you can adjust the layout of the template by adding some new things or removing some parts from the template. However, it is general to cover functional requirements, non-functional requirements, and domain requirements.

Part C: Submission

Each team is required to submit **one PDF file** into the Moodle platform by the project leader.
