

Object-Oriented Requirements Analysis

Part A: Introduction

This task is to model your software system by using object-oriented requirements analysis. There are the following three tasks:

- (1) **Functional modeling:** Provide the [use case diagram](#) for your software system.
- (2) **Static modeling:** Provide the [class diagram](#) for your software system.
- (3) **Dynamic modeling:** Provide the [sequence diagram](#) for each use case in your software system.
- (4) Except for the above three diagrams, it would be welcome to provide more diagrams, such as communication diagrams, state diagrams, activity diagrams, etc.

Part B. Writing Object-Oriented Requirements Analysis Specification

- (1) Please refer to the template in the Moodle platform. It should be noted that you can adjust the layout of the template by adding new things or removing parts from the template.
- (2) For all diagrams in your report, use the standard tools to draw them; it is not acceptable to draw the diagrams by hand.
- (3) In the report, the division of labor among group members should be given.

Part C: Submission

Each team is required to submit **one PDF file** to the Moodle platform by the project leader.
